SECURITY ■ RISK MANAGEMENT

ACTIVECYBER AT A GLANCE

ACTIVECYBER is a team of cybersecurity and risk management professionals headquartered in the Washington, D.C. area. We advise C-Suite, Executive Committee and Technology leadership on maturing and maintaining their cybersecurity posture. Since 2002, our leadership team has been relied upon to spearhead and resolve the most discrete cybersecurity matters. Adoption of our **ACTIVE Framework™** is proven to enhance your cybersecurity posture regardless of your current state and instill confidence throughout your entire supply chain.

ACTIVECYBER EXPERTISE

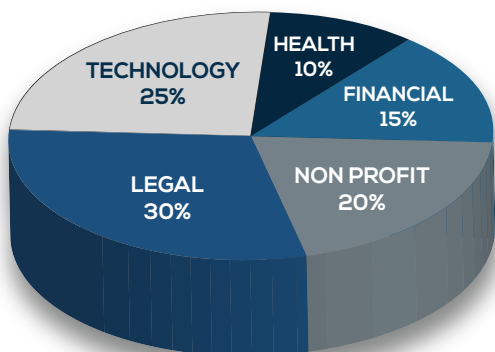

ACTIVECYBER's team of advisors, testers and subject matter experts are credentialed and published. We maintain industry-leading cybersecurity certifications to mature our client's posture, protect critical assets and demonstrate compliance.

ISO 27001 is a globally recognized standard mandating numerous controls for the establishment, maintenance, and certification of an information security management system (ISMS). ACTIVECYBER's ISMS is designed to cover all vital areas of a robust information security program with a specific concentration on providing secure services for client data. ACTIVECYBER demonstrates a systematic and documented approach to protecting and managing sensitive client information and information entrusted to it by third parties.

CLIENTS BY INDUSTRY

ACTIVECYBER RESEARCH

ACTIVE Labs - Powered by ACTIVECYBER, LLC

ACTIVE Labs was created to hunt and research undiscovered vulnerabilities, report via responsible disclosure programs, publish advisories, develop and validate new patches, and to share this for the advancement of the cybersecurity community. Our mission is to secure our clients, partners, and the technology community as a whole.

We are actively providing the community with verified findings and research that leads to the creation of new **Common Vulnerabilities and Exposures (CVEs)** and updates to the **National Vulnerability Database (NVD)**.
